INFRINGEMENT REPORT

SUBJECT PATENT: US10674196B2

PRIORITY DATE: JUNE 15, 2015

INFRINGING ENTITY NAME: KICK

CHART STRENGTH: MEDIUM

PATENT TECHNOLOGY: VIDEO STREAMING

PRODUCT NAME: KICK LIVE

KICK REVENUE: <$177.3 MILLION (SOURCE)

PRODUCT RELEASE DATE: 2023 (SOURCE)

Note: Fewer back-end sources are not available; therefore, on-device testing evidence has been used to show the functionality from the front-end. The device testing was done on June 2nd, 2025.

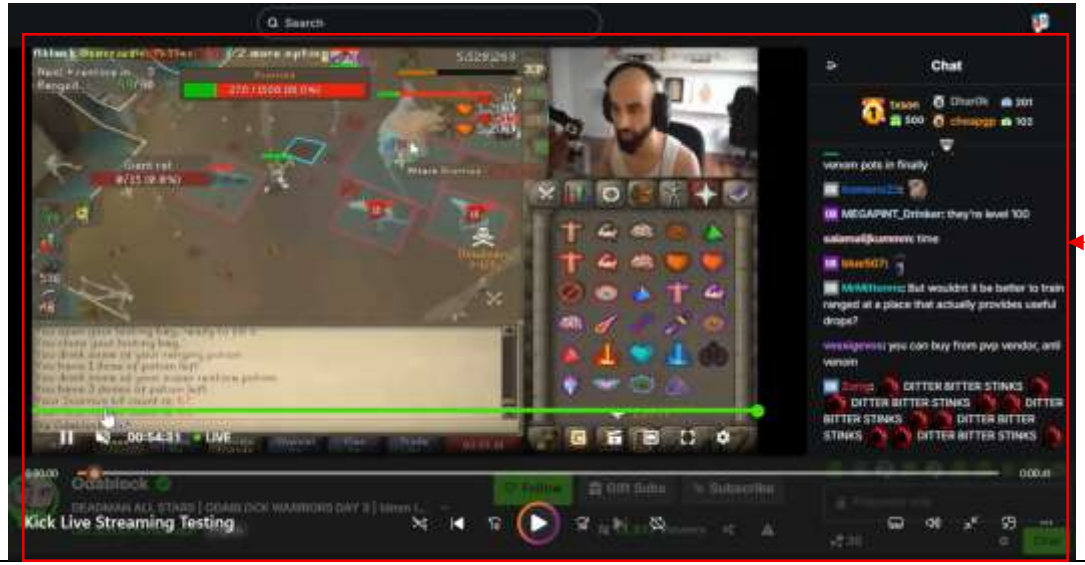

US10674196B2	Specification support	Kick Live Stream
1. A method of providing a portion of content comprising: receiving a data stream including the content;	*(Col. 2, Ln.39-42) "The portion of content may be a replay of data previously processed for transmission."*	*A method of providing a portion of content (i.e., video rewind) comprises receiving a data stream (e.g., Kick Live data Stream) that includes the content.* *Kick Live Stream allows users to stream their live video to viewers, who can view the live stream video on their graphical user interface (GUI). Additionally, viewers can rewind the live stream by pressing the back button or by dragging the bar to the desired time.* **How to Stream on Kick.com** Updated this week Begin your Kick streaming journey by following our guide on how to go live. Kick supports all major live streaming applications including (but not limited to): • OBS (Open Broadcaster Software) • XSplit • Streamlabs Desktop This article has separate sections on OBS and Streamlabs Desktop. **Step 5 - Going Live** You are now ready to start your live stream! Press the "**Start Streaming**" button from your OBS software. Source: https://help.kick.com/en/articles/7066931-how-to-stream-on-kick-com

How To Use Kick's New Feature

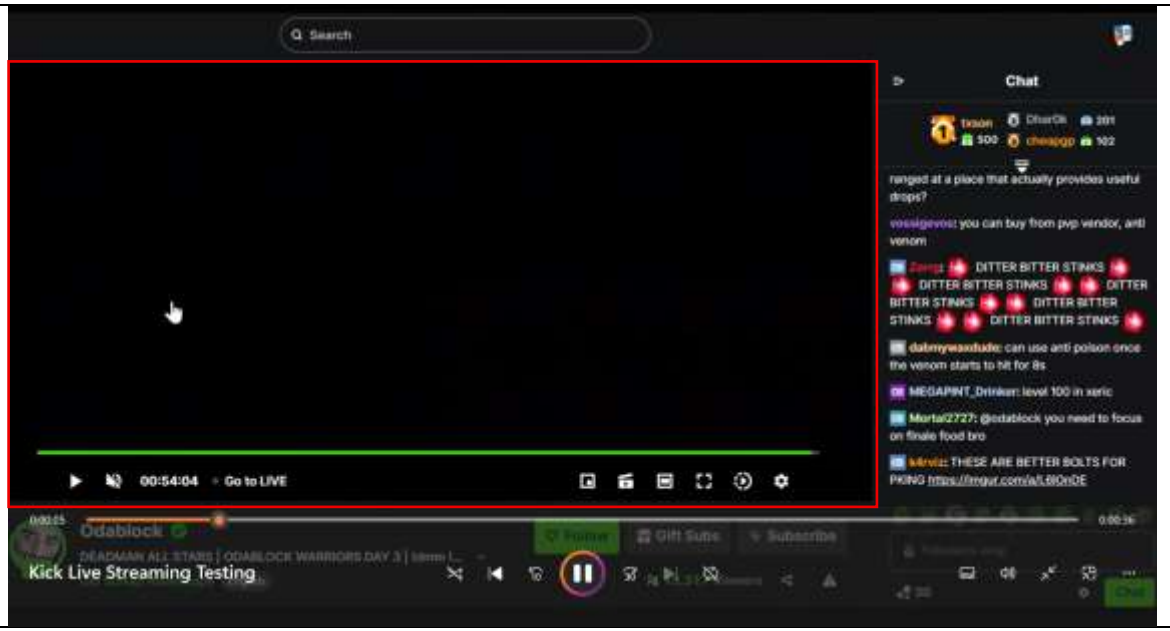

The feature is currently only available to website users and will soon be available on mobile devices as announced by Kick. Follow this step-by-step guide to use the feature:

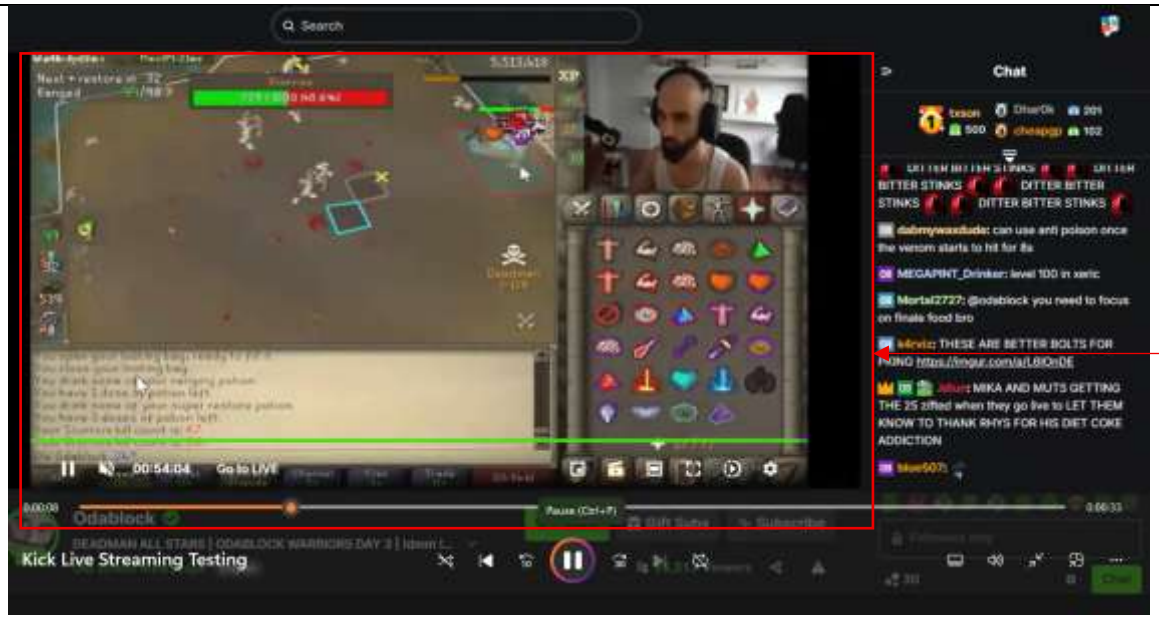

- **Step 1**: Open a Live Stream. Log in to your Kick account and open your favorite stream.
- **Step 2**: At the bottom of the video player, you'll find the playback controls. Tweak your playback options, which include quality options, clip features, and full screen or theatre mode. A seek bar pops up now for the viewers when you hover near the bottom of the video player.
- **Step 3**: Use the seek bar for precision, and drag the cursor to rewind to a specific timestamp. Release the cursor to resume playback from the chosen point.
- **Step 4**: To return to the live broadcast, look for the live button (usually located near the playback controls). Click it, and the stream will jump back to the current moment.

		 <u>(Hands-on testing Chrome browser) – June 02, 2025</u>
processing the received data stream including the content; transmitting the processed received data stream; storing a portion of the received data stream corresponding to a predetermined time period prior to a time instant;		*Processing (i.e., encoding) the received data stream including the content (i.e., Kick Live data Stream).* *transmitting the processed received data stream and storing a portion of the received data stream corresponding to a predetermined time period prior to a time instant.* *Kick Live stream is sent to the encoder, which encodes the live stream before sending it to the viewer. Further, the stream is sent to the cache server and stored in the cache servers before delivering to the viewers.*

Step 3 - Output Settings

We appreciate that everybody's setup is different, so we have prepared a number of different instructions below for different encoders and setups.

To ensure the best possible streaming experience, please check your maximum upload speed for your internet connection and ensure your bitrate settings do not exceed this.

To change your output settings, please click the **Output** option from the OBS Settings page.

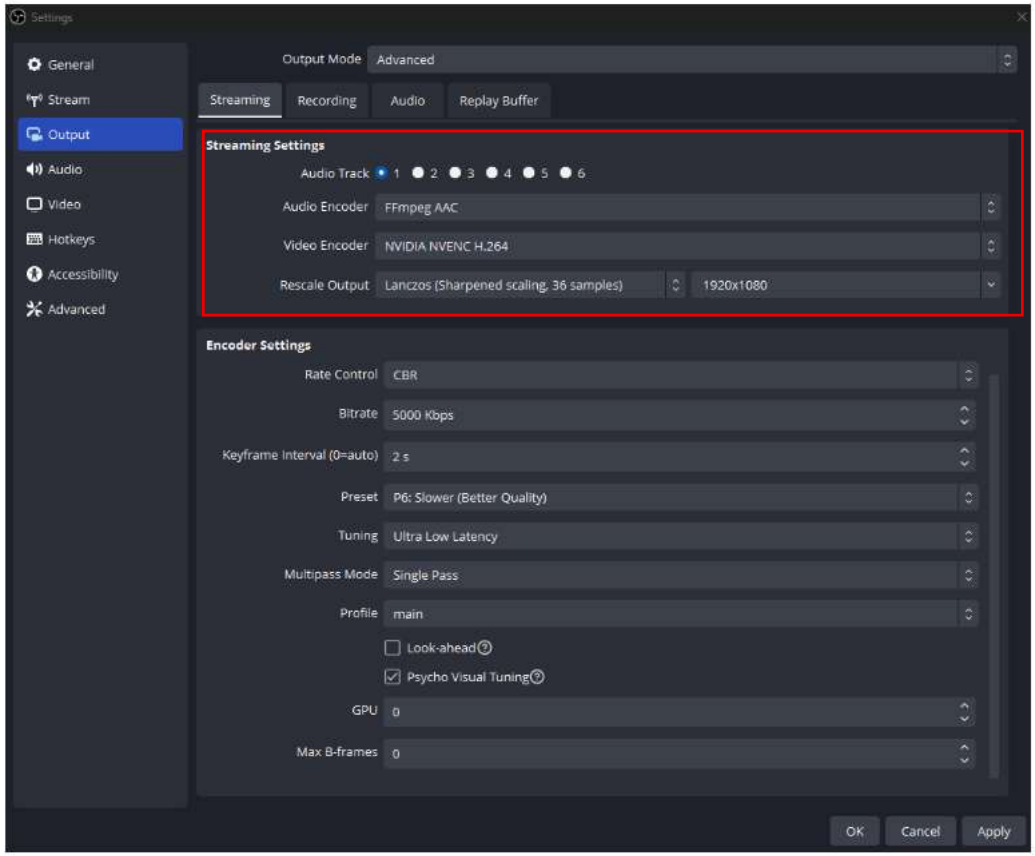

x264 Encoding Options

Rescale Output: Please only enable this option if you are using a base resolution greater than 1920x1080.

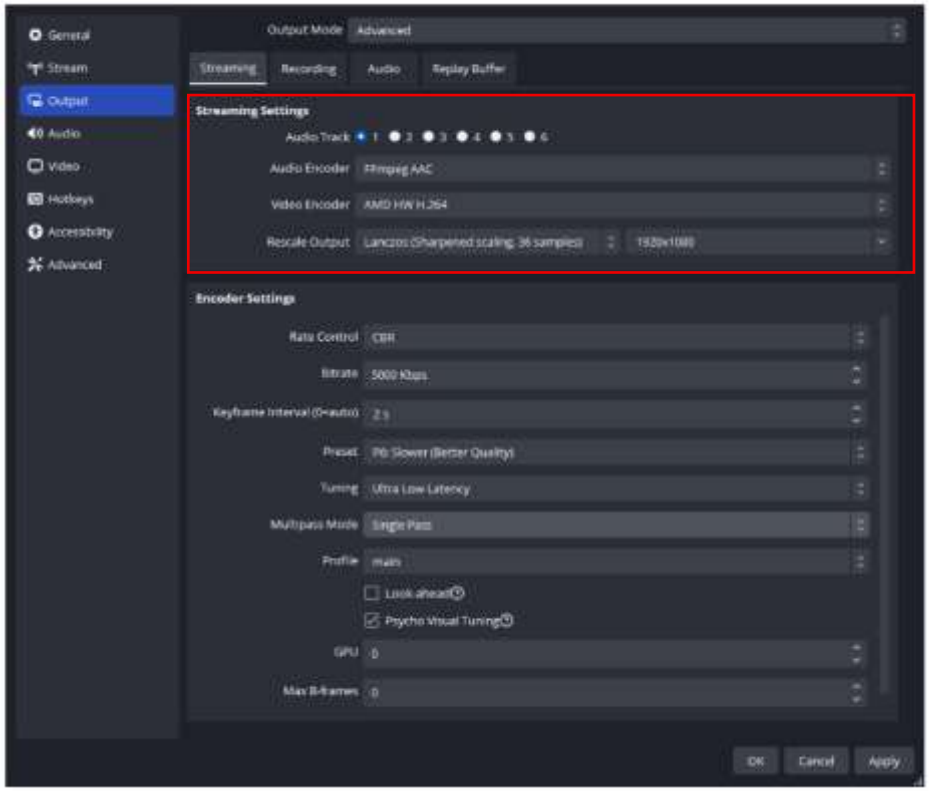

Encoder	x264
Rescale Output	1920 x 1080
Rate Control	CBR
Bitrate *	1,000kbps to 8,000kbps
Keyframe Interval	2s
CPU Usage Preset	veryfast
Profile	main
Tune	zerolatency

Bitrate: Kick supports a bitrate of up to 8,000kbps - please ensure you check your internet connection's maximum upload speed.

CPU Usage Preset: Changing your preset will affect your CPU usage when streaming.

Content Delivery Network Integration

CDN integration plays a crucial role in ensuring high-quality and reliable streaming performance on the Kick platform. By integrating a CDN, Kick can distribute its content across multiple servers worldwide, reducing latency and improving overall stream quality for viewers. This integration enables Kick to scale its streaming capabilities to accommodate a larger audience without sacrificing performance or reliability.

		Kick's integration with a CDN enables faster delivery of content by caching and distributing it to servers located closer to viewers, reducing buffering and load times. This means that when you go live on Kick, your stream will be delivered seamlessly to your audience, ensuring a smooth and uninterrupted viewing experience.
