ANALYSIS REPORT

US8231588B2 VS. SPHENOCATH INTRANASAL CATHETER

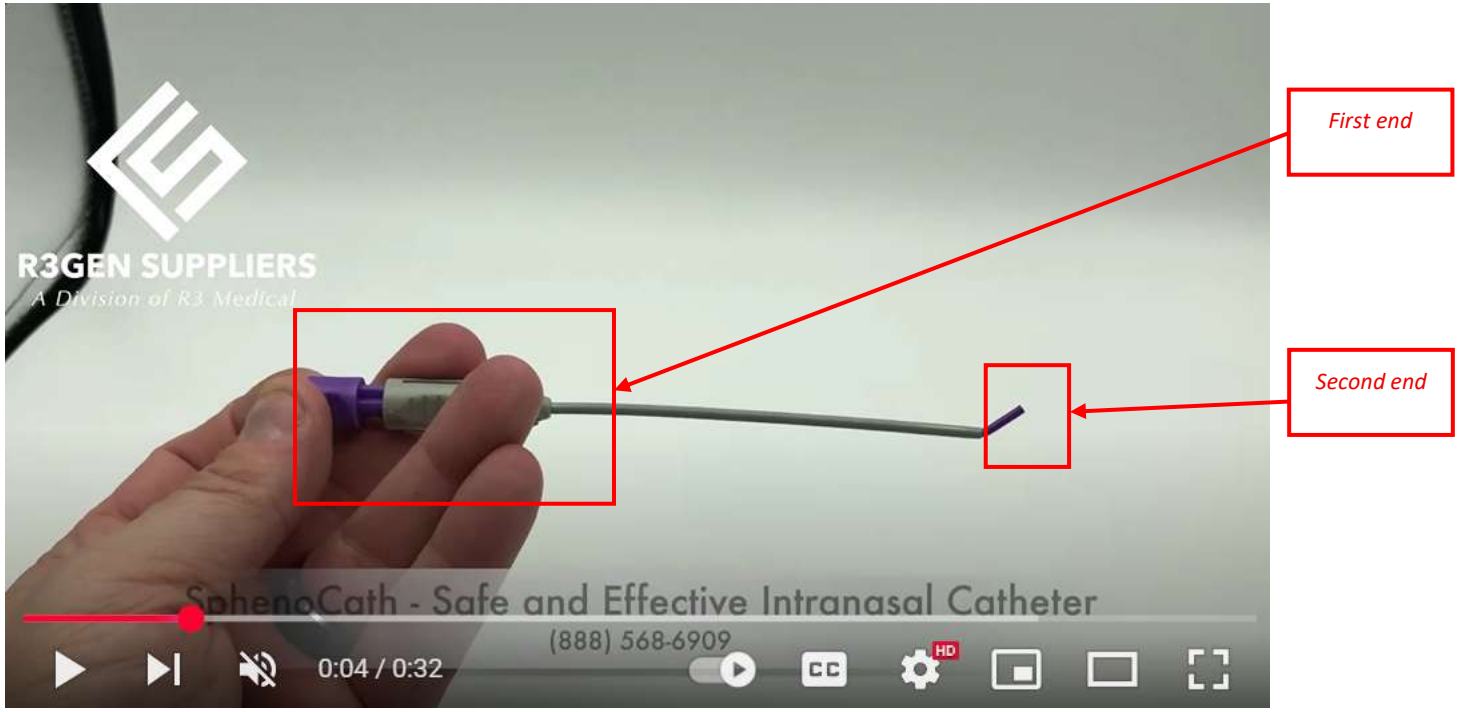

Privileged and Highly Confidential

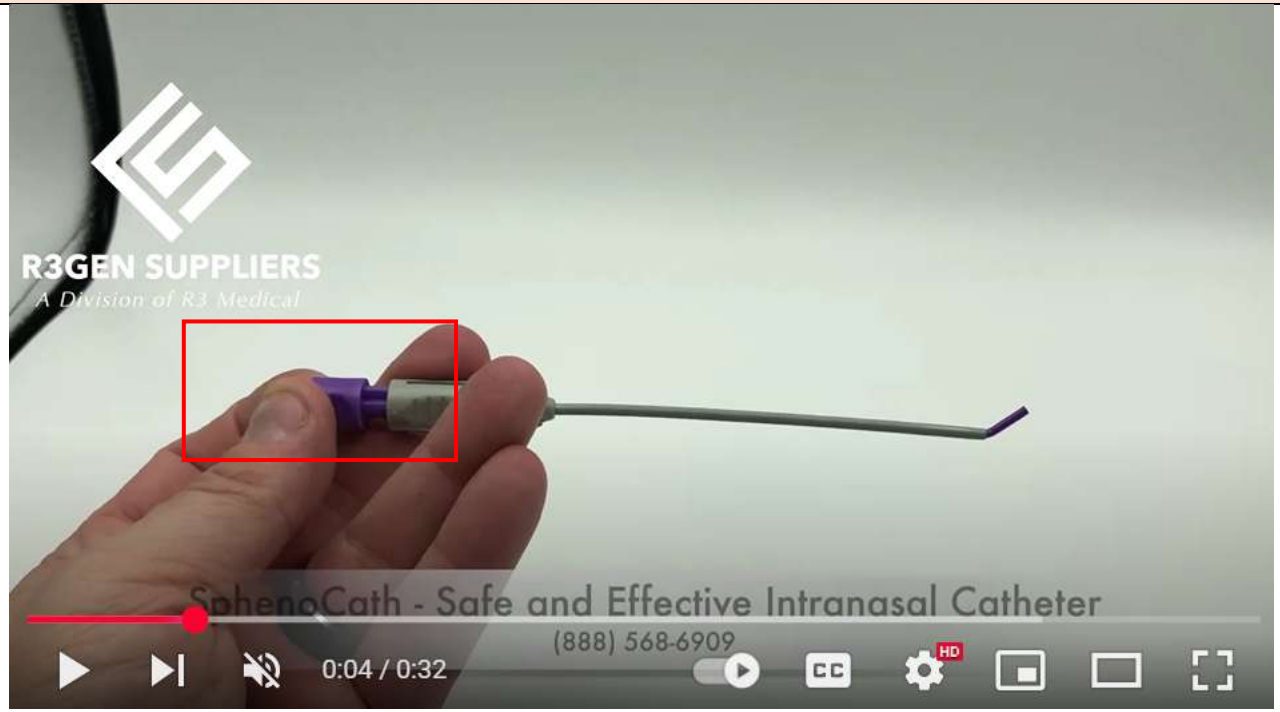

SUBJECT PATENT	US8231588B2
PRIORITY DATE	AUG. 1, 2008
PATENT TECHNOLOGY	NASAL DELIVERY DEVICE
CHART STRENGTH	HIGH
ENTITY NAME	SPHENOCATH
PRODUCT NAME	SPHENOCATH INTRANASAL CATHETER
SPHENOCATH REVENUE	$5 MILLION (SOURCE)
PRODUCT CATEGORY	MEDICAL DEVICE
BUSINESS TYPE	B2B | BUSINESS TO BUSINESS
PRODUCT RELEASE DATE	FEBRUARY 2013 (SOURCE)

US8231588B2	Specification Support	SphenoCath Intranasal Catheter
1. A device for delivering a medicament to a patient in need thereof, the device comprising: an injector comprising a first end configured to remain outside a patient's nasal passage and a second end configured for entry into the patient's nasal passage; and	*FIGS. 1-4 show a representative device **10** for delivering a medicament to a patient in need thereof. The device **10** includes an injector **12** comprising a first end **29** configured to remain outside a nasal passage of the patient and a second end **30** configured for entry into the nasal passage of the patient. Device **10** further includes an introducer **18** configured for engagement with a nostril of the patient and comprising a passageway **48** configured for slidably receiving the injector **12**. The injector **12** is moveable between a storage position (best shown by FIG. 1) preceding engagement of introducer **18** with a patient's nostril, and an engaging position (best*	*A device for delivering a medicament to a patient in need thereof, the device comprising:* *an injector comprising* *a first end configured to remain outside a patient's nasal passage and* *a second end configured for entry into the patient's nasal passage; and* *SphenoCath is a medical device designed to deliver a drug or an injectate to the sphenopalatine ganglion (SPG) block.*

		OVERVIEW Sphenocath is a flexible intranasal catheter great for injecting biologics into the nasal passage. Details More Information Reviews A unique and specially designed medical device to assist medical professionals in injecting small amounts of fluid into the nasal passage, including the area of the inferior turbinate, superior turbinate, sphenopalatine foramen, etc. It is intended for use on patients with intact nasal mucosa. The device allows safe and easy and access to the inner most hidden areas of the nasal pathway. Source: https://www.regensuppliers.com/sphenocath.html?srsltid=AfmBOoqmHMxYEPL0c_NYrq3P2OOLtKriZwm9q1RAmHSkzROtSclDzOZB SphenoCath In as little as a few minutes, the newSphenoCath® device and procedure for administering a sphenopalatine ganglion (SPG) block provides most patients with immediate relief of headache pain with a simple, gentle, comfortable in-office procedure. The revolutionarySphenoCath® device delivers anesthetic through the nasal cavity, effectively delivering an SPG block for migraine pain without the use of needles, cotton swabs, or harsh meds. For most, the procedure is comfortable, while others may briefly feel a very slight nasal irritation. This device allows a low risk, simple procedure that is a pain management game-changer for anyone who experiences four or more severe headaches a year.
